PROFESSIONAL SUMMARY

Curious and driven Computer Science & Engineering undergraduate who enjoys solving real-world problems through clean code and strong DSA fundamentals. Experienced building secure, scalable full-stack applications. Actively seeking software engineering or full-stack roles to contribute to impactful products and grow continuously as an engineer.

EDUCATION

B.E. Computer Science & Engineering

Sri Krishna College of Technology | 2023 – 2027

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming (OOP)

Higher Secondary Education

Holy Family Convent Matriculation Higher Secondary School | Graduated 2023

WORK EXPERIENCE

Software Engineering Intern

Amypo Technologies Private Limited | 6 Months (India)

Gained 6 months of experience as a proficient software developer contributing directly to the architecture, scalability, and security of enterprise-grade cross-platform applications serving 10,000+ concurrent users.

PROJECTS

Task Management System [\[GitHub\]](#)

Next.js · Spring Boot · PostgreSQL · Docker

- Architected a scalable full-stack task management platform equipped with secure role-based access control for efficient task delegation.
- Developed robust RESTful APIs and streamlined PostgreSQL database queries to significantly enhance data retrieval performance.
- Containerized backend services using Docker to streamline deployments and ensure consistent environments.

- Engineered a robust hotel management platform using Spring Boot and React, featuring a decoupled architecture and RESTful API integration.
- Implemented stateless authentication using JWT and Spring Security, including RBAC to differentiate between Admin and User privileges.
- Integrated AWS S3 for scalable cloud-based storage, enabling efficient management and retrieval of high-resolution room images.
- Enhanced MySQL relational schema using Spring Data JPA/Hibernate for efficient data persistence and complex query handling.

- Engineered a full-stack scheduling system using Spring Boot and Next.js, integrating Timefold AI solver to automate conflict-free timetable generation by evaluating thousands of permutations.
- Programmed 15+ complex mathematical constraints for optimal resource allocation and implemented Server-Sent Events (SSE) for real-time solver progress updates.
- Secured APIs with JWT authentication and improved frontend rendering with TanStack Query, enabling dynamic timetable interaction and PDF/ZIP exports.

SKILLS

- | | | |
|--|---------------------|---|
| • C++, Java, JavaScript, TypeScript, SQL | • React, Next.js | • Spring Boot, Spring Security |
| • AWS S3, Docker, JWT, Git | • MySQL, PostgreSQL | • DSA, OOP, Operating Systems, Networking |
-

ACHIEVEMENTS

500+ LeetCode

Solved 500+ DSA problems demonstrating strong algorithmic thinking.

Full-Stack Deployments

Built and deployed multiple end-to-end apps with React, Spring Boot, and Node.js.

Security Ownership

Recognized for delivering security-critical features reliably during internship.
